Crosin (EC 3.4.21.10) precursor - pig
N;Alternate names: 53K fucose-binding protein
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 10-Sep-1999 #sequence revision 10-Sep-1999 #text_change 10-Sep-1999
C;Accession: A34170; S08994; S02428; S04940; S16657; S02780; S10695; S12968
C;Accession: A34170; Watanabe, K.; Itoh, H.; Michikawa, Y.; Kimura, K.; Takada, J. Biol. Chem. 264, 11920-11927, 1989
          R. Adham, I. M.; Klemm, U.; Maier, W.M.; Engel, W.

Hum. Genet. 84, 125-138, 1990
A;Title: Molecular cloning of human preproacrosin cDNA.
A;Reference number: A£1022
A;Status: not compared with conceptual translation
A;Molecula type: mRNA
A;Residues: not compared with conceptual translation
A;Molecula type: mRNA

trypsin (EC 3.4.21.4) II precursor [validated] - human
NyAlternate names: trypsin 2; trypsin, anionic; trypsinogen II
C;Species: Homo sapiens (man)
C;Date: 03-Mar-1994 #sequence revision 03-Mar-1994 #text_change 08-Dec-2000
C;Accession: B2882; A61066; E43988
R;Emi, M.; Nakamura, Y.; Ogawa, M.; Yamamoto, T.; Nishide, T.; Mori, T.; Matsubara, K.
Gene 41, 305-310, 1986
A;Fitle: Cloning, characterization and nucleotide sequences of two cDNAs encoding human I
A;Reference number: A31544; MUD:86221712; PMD:3011602
A;Accession: B2882
A;Molecule type: mRNA
A;Residues: 1-247 <man

Trypsin-like protease found in the human airway.";
Am. J. Respir. Cell Mol. Biol. 16:300-308(1997).

-I-FUNCTION: May play some biological role in the host defense system on the mucous membrane independently of or in cooperation with other substances in airway mucous or bronchial secretions.

-I-CATALYTIC ACTIVITY: Preferentially cleaves the C-terminal side of arginine residues at the Pl position of certain peptides, cleaving Boc-Phe-Ser-Arg-4-methylcoumaryl-7-amide most efficiently and having an optimum pH of 8.6 with this substrate.

-I-ENZYME REGULATION: Strongly inhibited by diisopropyl fluorophosphate, leupeptin, antipain, aprotinin, and soybean trypsin inhibitor at 10 microm.

-I-SUBUNIT: Monomer.

DISEASE: Defects in TMPRSS3 are a cause of childhood-onset autosomal recessive neurosensory deafness 8 (DFNB8) [MIM:601072]
DISEASE: Defects in TMPRSS3 are a cause of congenital autosomal recessive neurosensory deafness 10 (DFNB10) [MIM:605316].
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
SIMILARITY: Contains 1 SRCR domain.
SIMILARITY: Contains 1 LDL-receptor class A domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CYTOPLASMIC (POTENTIAL).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mammalian cell growth.";
Proc. Natl. Acad. Sci. U.S.A. 90:7181-7187(1993).
-!- FUNCTION: Plays an essential role in cell growth and maintenance
of cell morphology.
-!- SUBCELLULAR LOCATION: Type II membrane protein.
-!- TISSUE SPECIFICITY: Present in most tissues, with the highest
level in liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=88209431; PubMed=2835076;

Mouse plasma kallikrein: cDNA structure, enzyme characterization,

The mode plasma kallikrein and mRNA levels among species.";

DNA Cell Biol. 9:737-748(1990).

-!- FUNCTION: THE ENZYME CLEAVES LYS-ARG AND ARG-SER BONDS. IT

ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BINDING

TO A NEGATIVELY CHARGED SURFACE. IT ALSO RELEASES BRADYKININ FROM

HWM KININOGEN AND MAY ALSO PLAY A ROLE IN THE RENIN-ANGIOTENSIN

SYSTEM BY CONVERTING PRORENIN INTO RENIN.

-!- CATALYTIC ACTIVITY: Cleaves selectively Arg-|-Xaa and Lys-|-Xaa

bonds, including Lys-|-Arg and Arg-|-Ser bonds in (human)

kininogen to release bradykinin.

C -!- SUBUNIT: THE ZYMOGEN IS ACTIVATED BY FACTOR XIIA, WHICH CLEAVES

THE MOLECULE INTO A LIGHT CHAIN, WHICH CONTAINS THE ACTIVE SITE,

AND A HEAVY CHAIN, WHICH ASSOCIATES WITH HWW KININOGEN. THESE

C -!- SUBUNITY: BELONGS TO PEPTIDASE FAMILY SI. PLASMA KALLIKREIN

STHERANTLY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BINDING

IT IS A SERINE PROTEASE OF TRYPSIN-LIKE CLEAVAGE SPECIFICITY, IT IS A SERINE PROTEASE OF TRYPSIN-LIKE CLEAVAGE SPECIFICITY, IT IS A SERINE PROTEASE OF TRYPSIN-LIKE CLEAVAGE SPECIFICITY, IT IS SYNTHESIZED IN A ZYMOGEN FORM, PROACROSIN AND STORED IN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- CATALYTIC ACTIVITY: Hydrolysis of Arg-|-Xaa and Lys-|-Xaa bonds;
preferential cleavage Arg-|-Xaa >> Lys-|-Lys >> Lys-|-Xaa.
-!- SUBUNIT: HEAVY CHAIN (CATALYTIC) AND A LIGHT CHAIN LINKED BY TWO DISULFIDE BONDS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.

C -!- FUNCTION: THE BNZYME CLEAVES LYS-ARG AND ARG-SER BONDS. IT

ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BINDING

C ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BINDING

C ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BINDING

C ACTIVATES AND MAY ALSO PLAY A ROLE IN THE RENIN-ANGIOTENSIN

SYSTEM BY CONVERTING PRORENIN INTO RELIN.

C CATALYTIC ACTIVITY: Cleaves selectively Arg-|-xaa and Lys-|-xaa

C CATALYTIC ACTIVITY: Cleaves selectively Arg-|-xaa

C CATALYTIC ACTIVITY: Cleaves bradykinin.

C CATALYTIC ACTIVITY: THE ZYNGGEN IS ACTIVATED BY FACTOR XIIA, WHICH CLEAVES

C CATALYTIC BLONGEN IS ACTIVATED BY FACTOR XIIA, WHICH CLEAVES

C CHAINS ARE LINKED BY ONE OR MORE DISULFIDE BONDS.

C CALAINS ARE LINKED BY ONE OR MORE DISULFIDE BONDS.

FUNCTION: COULD REGULATE PROTEOLYTIC EVENTS ASSOCIATED WITH C. TESTICULAR GERM CELL MATURATION.

C. I. FUNCTION: Attached to the membrane by a GPI-anchor (Potential).

C. I. SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor (Potential).

C. I. ENSUE SPRCIFICITY: Testis.

C. I. DEVELOPMENTAL STAGE: EXPRESSED IN POST-MEIOTIC TESTICULAR GERM CELLS.

C. I. SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.

C. I. CAUTION: REF: SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A STOP CODON IN POSITION 315.
